**Several State Agencies reside in the Ogden Regional Center. With tenants ranging from Adult Probation and Parole to the Department of Health, the building caters to a diverse cross section of Northern Utah residents.**

The State of Utah Division of Facilities Construction and Management put out a bid to upgrade the existing Honeywell Delta-1000 Fire Alarm Control Panel that had served to protect the 8-story building for over 15 years. The new system had to comply with current codes and the new NICET standards as enforced by the Utah State Fire Marshals Office.

Utah-Yamas Controls was awarded the bid and immediately went to work on the upgrade. Overall, the design required that the old system had to remain fully functional until the new fire alarm panels was installed and operational.

Utah-Yamas Controls devised a unique approach on this project by running both the old and new fire alarm system simultaneously. A single floor would be switched out to the new system as it was completed.

This approach required that the State Fire Marshal Test and Inspect every floor before we moved on to the next floor. All of the testing was accomplished at night, so the tenants were not disturbed.

The system has over 500 devices, and includes audio evacuation and a fire fighters telephone system.

In addition to the new fire alarm system, Utah-Yamas Controls has also installed a completely integrated Access Control, Security and CCTV System for this building.
